

what is difference between php4 and php5?

Topics : [PHP](#)

Written on [December 31, 2020](#)

Let see below Difference in php4 and php5 for PHP Tutorial.

- PHP4 doesn't support `__construct` and `__destruct` (Unified construct and destruct).
- PHP 4 doesn't support `E_STRICT`.
`E_STRICT` means it will notify you when you use depreciated code.
- PHP 4 doesn't support Passed by Reference(& operater). Only pass by value

- PHP 4 doesn't support access specifier `public`, `private`, `protected`(Data Encapsulation).
- PHP\$ doesn't support Magic Functions like `__construct`, `__destruct`, `__call`, `__get`, `__set`

- PHP 5 also has a new improved MySql extension called `MySqli`.

- The new PHP 5 object model has many new features which include:
 - Encapsulation (visibility)
 - Abstract Classes
 - Interfaces
 - Destructors
 - Type Hinting

Output :
