

PHP strtolower() Function

Topics : [PHP Functions](#)

Written on [April 21, 2021](#)

PHP strtolower() Function makes all characters of string to lowercase. It is php in-built function.

Syntax :

```
strtolower(string);
```

Parameters ,

string : Required. It is required to make all characters of string to lowercase.

It returns the lowercased string.

Similar function of strtolower():

[ucwords\(\)](#): It makes the first character of each word to uppercase in string.

[strtoupper\(\)](#) : It converts a whole string into uppercase.

[lcfirst\(\)](#) : It converts only the first character of a string into lowercase.

[ucfirst\(\)](#) : It converts only the first character of a string into uppercase.
