

PHP array_values() Function

Topics : [PHP Functions](#)

Written on [April 29, 2021](#)

PHP array_values() Function is used to get all value of array. PHP array_values() function is PHP built-in function.

Syntax :

```
array_values(array $array);
```

Parameter,

\$array : Required. It is input array.

Return : It returns array containing all values of an array. The returned array will have numeric keys which is starting at 0 and increase by 1.

Let's see below example to understand php array_values() Function in details.

Example :

```
<?php
$array=array("Gujarat"=>"Gandhinagar","Maharashtra "=>"Mumbai","Madhya
Pradesh"=>"Bhopal","Goa"=>"Panaji");
echo "<br>It returns array containing the all values of ".$array <br>";
$array_values = array_values($array);
print_r($array_values);
?>
```
