Node.js Send an Email

Node.js nodemailer module is used to send an Email.

The Nodemailer module can be downloaded and installed using npm as below command.

```
D:\nodejs\website> npm install nodemailer
```

You can include above downloaded package in your application as below.

```
var nodemailer = require('nodemailer');
```

You can send email using host, port and authentication details like username, password as below.

Example :

```
var nodemailer = require('nodemailer');

var transporter = nodemailer.createTransport({
  host: "smtp-relay.*****.com",
  port: 8888,
  auth: {
    user: '*****@gmail.com',
    pass: '*****'
  }
});

var mailOptions = {
  from: 'arya*****@gmail.com',
```

```
to: 'rec*****@yahoo.com',
subject: 'Send an email using Node Js!',
html: 'Welcome to aryatechno tutorials!!!'
};

transporter.sendMail(mailOptions, function (error, info) {
  if (error) {
    console.log("error:" + error);
    return false;
  } else {
    console.log('Email sent: ' + info.response);
    return true;
  }
});
```
