

PHP foreach loop

Topics : [PHP](#)

Written on [January 07, 2021](#)

The foreach loop is used to get each element value in an array. foreach loop is used to loop through each key/value pair in an array.

Syntax:

```
foreach ($array as $key=>$value) {  
    code to be executed;  
}
```

Example :

PHP program code to print array elements using foreach loop. The below example will give output the values of the given array (\$fruits).

```
<?php  
    $fruits = array("Apple", "Banana", "Orange", "Mango");  
    foreach ($fruits as $key=>$value) {  
        echo "$key : $value <br>";  
    }  
?>
```

Output:

```
0 : Apple  
1 : Banana  
2 : Orange  
3 : Mango
```

Output :
