The WordPress Media Library is a centralized repository where you can manage and organize all your media files, such as images, videos, audio files, and documents. It's a crucial component of the WordPress platform, providing a user-friendly interface for handling your website's multimedia content.

Here's an overview of how to use the WordPress Media Library:

Accessing the Media Library:

1. Login to Your WordPress Dashboard:

- Navigate to your WordPress admin area by adding /wp-admin to your website's URL and log in.

2. Go to Media Library:

- In the admin dashboard, find and click on "Media" in the left-hand menu.

Uploading Media:

1. Add New:

- Click the "Add New" button at the top to upload new media files.

2. Drag and Drop or Select Files:

- You can either drag and drop files into the designated area or click the "Select Files" button to choose files from your computer.

3. Upload:

- After selecting files, click the "Upload" button to upload them to your Media Library.

Managing Media:

1. Edit Media Details:

- Click on any media item to view and edit its details. You can add or edit title, caption, alt

text, and description.

2. Bulk Actions:

- You can select multiple media items and perform bulk actions, such as delete, edit, or add to a gallery.

3. Filter and Search:

- Use the search bar or filter options to quickly locate specific media files.

Inserting Media into Posts/Pages:

1. Add Media to Post/Page:

- While editing a post or page, click the "Add Media" button to insert media from your library directly into your content.

2. Create Galleries:

- You can create galleries by selecting multiple images and clicking the "Create a new gallery" link.

Additional Tips:

1. Media Settings:

- In the Settings > Media section of your WordPress dashboard, you can configure default media sizes, thumbnail sizes, and other media-related settings.

2. Media Categories and Tags:

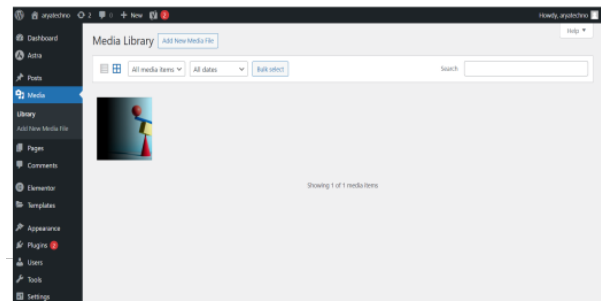

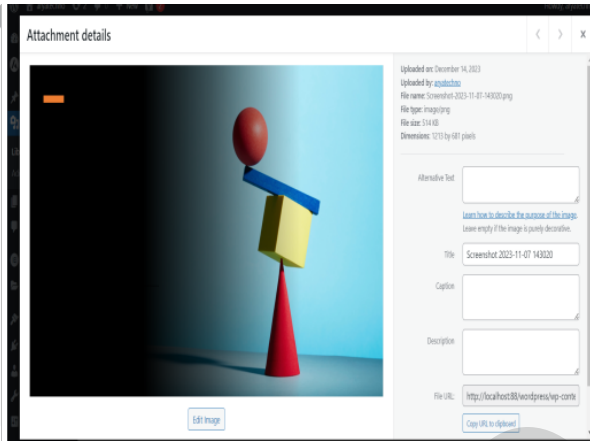

- Although WordPress doesn't have native support for categorizing or tagging media files, there are plugins available that can add this functionality.

3. External Media:

- WordPress allows you to embed external media like videos from platforms such as YouTube or Vimeo directly into your posts or pages.

4. Optimizing Images:

- Consider optimizing your images before uploading to improve website performance. You can use image compression tools or plugins for this purpose.
